

Service Inspections Defined & Inclusions

What's included in a Service Inspection?

All service inspections include an **engineer's report** showing any defects and recommendations.

We will then send you a quotation for any recommendations along with a **Service Inspection Completion Certificate**.

Athletics Inspections – Indoor and Outdoor from Low Level	
Indoor Throws Area	Inspect Netting – Is it fit for purpose, any defects, check hanging of net and operation, check supports can take loadings.
Long Jump/ Triple Jump	Check take-off boards, filler boards and troughs; Check landing area for appropriate depth and dimensions.
High Jump	Check posts, height adjustments and all moving components including casters. Check stability and also wear on components; Check landing areas for breaks in material and integrity of internal foam, check ware-mat and all attachments.
Sports Netting	Inspect netting, lanyards present if using sight screen, check hanging of net and operation, check supports can take loadings
Benches	Check wooden parts and steel supports, tighten where necessary.
Pole-vault area	Inspect Posts – appropriate padding, height adjustment mechanism operational, bar sits level, horizontal adjustments operate correctly, stability, tapes visible, winder mechanisms, anchoring sufficient and safe. Landing Areas - for breaks in material and integrity of internal foam, check ware-mat and all attachments.
Asymmetric Bars	Check rubber feet, check cables and turn-buckles, check floor fixings and stability. Check all moving parts
Trolleys, Carts and Storage	Check operational, all moving parts and fit for purpose
Hurdles	Check counterbalances operational, check hurdle tops secure, check rubber bungs and feet, check stability
Umpires stands	Check stability, all parts present, wheeling mechanisms
Plyometric boxes	Stability and surfaces intact
Floor anchors	Stable, not causing trip hazard and fitness for purpose
Starting blocks	Length adjustments operate, foot-blocks wear and stability

Weights equipment	Stability, check all cables and pulleys, check upholstery, check all moving parts, check anchorage.
Hammer cage	Check netting Is it fit for purpose, any defects, check hanging of net and operation, check supports can take loadings, check all pulley mechanisms, check ropes, check 1m distance requirements for implements hitting uprights, check all anchors, where collapsible check this is safely secured upright and operational, check gate dimensions and operation, check all uprights, check high level bracings.
Steeple chase	Check wooden beam, check anchorage of uprights, check height adjustment
General Inclusions	All nuts and bolts tightened in required, and low level adjustments undertaken if easily accessible, low level lubrication undertaken where necessary, identify compliance with BS EN 1892. Check compliance where indicated with UK Athletics and Sport England/ Scotland/ Wales Guidelines
Engineers Report Completion Certificate Quotation for recommendations	
Exclusions:	Parts not included, where high level access is needed this is excluded from the inspection although low level inspection of high level parts is undertaken where these are fully visible. Trampolines, Portable Basketball Units, Play equipment, Hoists requiring LOLER Inspections, consumables and non-sports equipment all excluded.
